OCTOBER 2026 | MONTH TO DATE

Visibility, work and what comes next.

Brandify | Reporting window: October 1-14, 2026 | Measurements collected October 14 | U.S., English

60

AI answers checked

Three measured experiences

11 / 60

Named mentions

18.3% of selected answers

12 / 60

Website citations

20%; may overlap mentions

The decision this month

Protect the white-label pages that already earn citations, then strengthen broader AI-visibility service discovery. The general AI-visibility question group produced no Brandify mentions or citations in this baseline.

VISIBLE SIGNAL	CURRENT EVIDENCE	WHAT IT MEANS
White-label demand	One exact fulfillment question named and cited Brandify in all three measured experiences.	Make the cited page more useful and provide clear proof and inquiry paths.
Broader AI visibility	0 mentions and 0 site citations in 24 selected answers in that category.	Prioritize clear service evidence, implementation detail and credible outside references.
Google discovery	1 of 9 non-branded queries had a Brandify result in the top 20.	Use this dated snapshot to select priority pages and repeatable ranking checks.

Delivery status

Completed: three core profile updates, monthly-reporting wording corrections, five accepted Google recrawl requests and a successful 103-page crawler verification after a hosting restriction was cleared. Public report examples are available. A later default audit-route challenge needs hosting follow-up; an alternate route passed. Directory reviews and five crawl requests remain pending.

Baseline established, not growth proven. No comparable prior period or verified lead/revenue data is available in this report. Today's measurements do not establish an effect from the recent pricing or service changes.

AI VISIBILITY SCORECARD

Where Brandify appears today.

Discovery questions only | Four branded diagnostic checks excluded | One observation per selected question and experience

MEASURED EXPERIENCE	ANSWERS	NAMED MENTIONS	SITE CITATIONS
ChatGPT Search	25	5 / 25 (20%)	6 / 25 (24%)
Gemini	25	5 / 25 (20%)	4 / 25 (16%)
Google AI Mode	10	1 / 10 (10%)	2 / 10 (20%)

Discovery by customer need

White-label fulfillment — 4 / 12 named mentions | 4 citations

General AI visibility services — 0 / 24 named mentions | 0 citations

Advertising — 4 / 13 named mentions | 6 citations

Local services — 3 / 11 named mentions | 2 citations

Bar length shows the named-mention rate within each category. Category totals combine the measured experiences; question sets and sample sizes differ. They are not estimates of all customers or all AI answers.

An exact question worth protecting

"Which agencies offer white-label AEO and GEO fulfillment?"
Brandify was named and its website cited in ChatGPT Search, Gemini and Google AI Mode on October 14. The white-label landing page and comparison article were among the cited Brandify pages.

Reviewed counting rule: a named mention identifies Brandify in the answer; a site citation references brandify.io. Link destinations alone do not count as named mentions. Count each once per answer. A reviewed source-only result corrects the earlier named total from 12 to 11; citations remain 12.

TRADITIONAL SEARCH

A clear starting point for Google.

Live organic snapshots | October 14, 2026, 17:17-17:18 UTC | U.S., English, desktop | First 20 organic results

EXACT NON-BRANDED QUERY	BRANDIFY POSITION
best white label seo agencies	Not found in top 20
white label aeo	Not found in top 20
aeo agency	Not found in top 20
AI visibility agency	Not found in top 20
generative engine optimization agency	Not found in top 20
best geofencing platforms	Not found in top 20
geofencing advertising companies	12
CTV advertising agency	Not found in top 20
SEO agency Bradenton	Not found in top 20

The result already within reach

"geofencing advertising companies" returned Brandify at organic position 12. The ranking URL was the educational geofencing article, rather than the main service page. Improve the path from that article to the relevant service and inquiry pages, then retest.

Observed ranking page: What Is Geofencing Marketing?

For the branded query "Brandify", Brandify-owned pages appeared at positions 2, 5, 11 and 16; the result set also contained other businesses with similar names. Keep company identity, descriptions and profile links consistent.

No before-and-after ranking change is claimed. Absence from the first 20 results does not establish that a page is unindexed. These are organic search checks, not a local map-grid study or a complete traffic report.

COMPLETED WORK AND OPEN ITEMS

Show the work. Keep pending work visible.

Activity recorded through October 14, 2026 | Publication status and performance outcomes are separate

WORKSTREAM	STATUS	VERIFIED OUTPUT / FOLLOW-UP
Company profiles	Published	Clutch, LinkedIn and GoodFirms core descriptions and service positioning updated. Public core profiles checked. Some new location/client fields remained pending public display at last check.
Website reporting promise	Published	Six pages and five shared components updated to monthly reporting, with updates as needed. Live wording, metadata and relevant structured data checked.
Google crawl requests	5 accepted; 5 pending	Accepted requests: AEO, white-label, services, About and addressable display pages. Daily quota prevented five more. Retry the remaining queue when available; recrawl not confirmed.
Agency directories	Pending review	AgencyList and Agency Field Guide submissions/appeals reported completed by the owner. New public listings, backlinks and AI mentions have not been verified.
Crawler access	Follow-up needed	A 103-URL check returned HTTP 200 with no CAPTCHA. A later default audit-route check was challenged again; the U.S. route fetched the public AEO page successfully. Hosting follow-up is required; protections retained.
Search and AI baseline	Reviewed	60 discovery answers across three experiences; 11 named appearances and 12 site-citing answers. Ten live Google queries, including one branded query. No prior-period comparison.

Business outcomes need verified measurement

Organic traffic, AI referral visits, qualified leads, booked calls and revenue are **not measured in this sample**. Analytics and conversion-event configuration were not verified for this reporting window. Unavailable data is not zero performance.

NEXT REPORTING CYCLE

The next actions follow the evidence.

Monthly reporting, with updates as needed | Proposed priorities, separate from the completed work above

STEP	NEXT ACTION	WHAT THE NEXT REPORT SHOULD SHOW
1	Review the 12 content-similarity flags and give overlapping articles distinct roles.	Document verified overlap, useful revisions and relevant service-page links. A similarity flag alone does not establish a ranking penalty.
2	Build independent evidence of the SEO and AEO work.	Authentic client reviews and approved work examples, with outcomes supported by dated measurement. Retest the 24-answer general AI category.
3	Connect the geofencing article to the relevant service and inquiry path.	Verified live links and the next position for the same exact query and settings.
4	Follow up on the hosting recurrence, finish crawl requests and check directory decisions.	Record the working crawler route and hosting response. Separate accepted requests from confirmed indexing, and pending from live listings.
5	Verify analytics and lead events; repeat the baseline monthly.	Comparable search/answer observations, referral data where available and verified inquiries with attribution limits.

Measurement and coverage notes

Directly measured: ChatGPT Search (25 answers), Gemini (25) and Google AI Mode (10). ChatGPT used search-enabled requests; Gemini used the available model configuration; AI Mode used U.S. English desktop search settings. These observations may differ from a signed-in consumer session.

Outside the 60-answer scorecard: Google AI Overviews appeared in separate keyword-result checks, but no equivalent AI Overview prompt panel was completed. Perplexity, Microsoft Copilot, Claude and Grok were not measured.

Comparison rule: repeat the same exact questions, platform allocation, market and relevant settings each month. Record dates, answers, mentioned businesses, cited URLs and material accuracy issues. Mark changed questions or methods; compare only like-for-like subsets.

Evidence: dated October 14 answer and search records support the scorecards; saved publication checks support the work log. The full answer ledger is retained with the working records. This public sample omits internal files and private account details.

This is a real month-to-date example using Brandify's own data, not a completed full-month client result. Visibility can vary between tests. No ranking, citation, inquiry or revenue outcome is guaranteed.
